

#### SPECTRUM'S WAY

- Small, easy to service package, with low profile requires minimal operator attention.
- Storage feeder, with generous capacity, gets parts to an efficient straight line orientor.
- An integral live track feeds direct to the work station.
- Operation is quiet; easily controlled to 80dBa without cumbersome enclosures.

MACHINE

#### BOWL'S WAY

- Large, high profile system with awkward and limited storage capacity.
- Bowl agitates many parts at once; creating noise, parts abuse and self wear.
- Static gravity feed track reacts to jam conditions easily. This system demands more attention and you pay for it.
