

Engine connecting rods are end and face selected at 30 pieces per minute for process, inspection and assembly operations.

Orientation can be made from bulk storage or

one-at-a-time from your random delivery.

High efficiency orienting methods makes this effort amazingly quiet despite the part size and feed rate.

Feeder capabilities...

... are expanding!

And it's happening at **Spectrum**.

Call, write, or drop in and let the feeder people in on your problem.
