

Forge billets, weighing five pounds apiece, are fed at twenty per minute by this brute. It's a **Spectrum** Extra Heavy Duty Storage Feeder.

The 1-3/8 inch diameter x 13 inch long shafts are lifted with special cleats to a straight line orientor for near perfect performance.

High efficiency orientation keeps recirculation at a minimum. Sound pressure is less than 90 dBa without extra enclosures.

Work hardening manganese steel tooling assures long reliable life despite the work load.

Want to feed big stuff quietly?

The **Spectrum** team can do it!

# Others Have Tried!

We've done it!

**Spectrum's** onto the art of big, heavy parts feeding.

And we're tackling still bigger stuff.

Want to feed big parts efficiently?

Call, write or drop in and **Spectrum's** people will help you do it; quietly. (Small stuff too.)
