

These plastic bottle bottoms (three sizes; 32, 48 and 64 ounce) are fed to a high speed assembly machine at 200 pieces per minute.

They are stored, elevated, preoriented, final oriented and live fed with specially modified, standard Spectrum feeder products.

Smooth finish bottoms must not be scuffed or scratched; therefore the feed system was conceived for gentle handling and minimal recirculation.

Two others, before us, tried this job and failed. Save time and money! See Spectrum first.

A good first...

... choice will save you time and money sooner.

Get with Spectrum, first.

Call, write or drop in for feeder systems that work.
