

We use common sense methods to sort and feed these retainer washers at 125 pieces per minute. Even the hole is probed for location.

Bad parts and tramp materials are ejected automatically. It's done quietly and at a competitive price.

Spectrum: the feeder people.

One Press Made All...

... these retainer washers

Two pieces below the micrometer are good. The others are certain to jam tracks and starve production.

Got a problem like this?

Let **Spectrum** sort out the junk and feed good parts.

Call or write **Spectrum** for the way to better profit.
