

Here are two kinds of sheet metal springs for automotive oil filters. We feed them at 60 pieces, per minute, for assembly purposes.

Feeder design includes six cu. ft. of storage and gentle handling with a magnetic elevator. Pre-orienting tooling holds recirculation and noise to a

minimum. Live feed tracking eliminates the natural tendency of overlap jams.

Noise is limited to 85 dBA (down to 80 dBA if needed). Parts are released, one-at-a-time, for assembly pickoff action. We've got working answers for your feeder needs.

Better times...

... start with Spectrum's better machines.

Lowest product cost and highest return on investment comes from the better feeder. Spectrum offers the best.
