

This machine made it economical to auto-feed a large family of small-lot production parts. Oil Filter Center Tubes are oriented and fed, over an aisle, to an assembly machine at 30 pieces per minute. Orienter tooling and feed track are adjusted at changeover, in less than 30 minutes, using parts as setup gages.

Family Troubles...

... slowing your parts feeder payoff time?

Job Shop folks look to **Spectrum** for quick change tooling to feed similar (family type) parts efficiently.

Why? Because it's a way to cut handling costs with automation . . . and **Spectrum** does it best.

Try us. Call or write for the *best* answers to your parts feeding and assembly problems.
