

Plastic connector bodies are reliably stored, elevated, oriented, escaped, tracked and finally loaded into assembly nests at 15 per minute. Three barbed legs and a radical shape made this job a real challenge at every step.

Two others failed this challenge before the Spectrum team got it. Naturally, we're proud.

It's A Dog ...

we said; and politely refused to quote.

Our customer was sure the Spectrum team could do it. So he leaned on "us" — hard. It worked.

Got a dog? Lean on Spectrum (we like the easy ones, too).

Call or write for the best parts feeding and assembly solutions.
