

This 30 cu. ft. feeder gets Blanked Discs (5.75 inches dia. x 0.18 inch thick) to our customer's track *without* the old problems of tunneling, shingling, and excess recirculation. They're fed, reliably, at 2,400 pieces, per hour — quietly. We even reject scrap and bad parts.

Spectrum's time proven, standard machines and common sense tooling make *all* parts feeding better.

Spectrum, *the* feeder people.

If You Know Us...

... your first choice is Spectrum.

If you *don't* know us; ask around. Find out why *more* people depend on:

Spectrum, *the* feeder people.
