

These steering coupling blanks are fed to a process operation at 45 pieces per minute.

Without noise control features, this feeder would sound like a truck load of cowbells on a rough road.

High efficiency orientor tooling and standardized noise control features limit sound pressure at 80 dBa.

SPECTRUM feeders work . . . . . quietly.

# Quality is...

... SPECTRUM's specialty.

Over three-hundred SPECTRUM's went to quality buyers in 1978.
