

This family of coil springs is stored, elevated, oriented and multi-tracked to a host of process, inspection and assembly operations by specially tool-ed SPECTRUM feeders.

A built-in separator disentangles those springs which mesh together.

Springs are fed to end grinders, heat treat, inspection and final assembly by feeders with up to eight tracks.

Rates to 120 pieces per minute, per path are available with noise control to meet your specifications.

Feed springs profitably with SPECTRUM.

Tailored...

... to do your job best.

Competitive and adaptable for a variety of parts feeding needs.

Standard feeders to meet your needs; tailored by SPECTRUM.
