

Automotive rocker arm stampings are stored, elevated, distributed to multiple paths, oriented, escaped and tracked to an engine head assembly machine, in groups of six, at 85 pieces per minute.

Despite the part's bell-like ring, sound pressure is limited to 80 dBa.

Dependable, economical, quiet, long-life performance by SPECTRUM.

Your feeders are:

professionally designed

quality built

reliable

flexible

long-lived

quiet

and profitable

if they're SPECTRUM'S.

If not — call, write or drop in.
