

This family of Transmission Valve Sleeves is stored, elevated, preoriented, tracked, end selected, distributed to four paths, identification stamped and presented for automatic processing at 120 pieces, per minute.

Quick change tooling allows fast adaptability for all six parts through one feeder system.

Guards and sound control media are removed from distributor-stamper unit, in photo, for better view.

Sound pressure is limited to 80 dBa.

Do more...

... with feeder functions.

Accelerate payoff with SPECTRUM's "do more" extras.

Call, write or drop in.
