

Lash adjuster bodies are stored, elevated, oriented and fed to the magazines of two ball seat polishing spindles at 120 pieces, per minute.

Interfacing and testing of the feeder-polisher was done on SPECTRUM's floor for least cost performance qualification.

Despite the high production rate, sound pressure was held to 80 dBa without enclosures. High efficiency orientors did the trick.

Cut costs...

... with dependable parts feeders.

Do it best with SPECTRUM; the parts feeder people.

Call, write or drop in for a look at dependability in action.
