

This unique rod feeder concept can be adapted to one or a family of diameters and lengths. Prestacked in special gondolas, these steel billets are loaded into the open frame rod feeder. A built-in hoist opens the gon gate, releasing

parts to the feeder agitator for flow metering, diameter to diameter, to an induction heater.

Its quiet, gentle action is a prime solution to jackstrawing problems in bulk handling.

You can earn...

... faster payback with a SPECTRUM feeder.

Many pay for themselves in less than a year.
