

This hat shaped metal stamping is bulk stored, flow metered, oriented, and live fed to a process operation at 70 pieces per minute.

A storage bin bulk meters parts to a pair of opposed orienting conveyors. Parts are coaxed into proper attitude and sent to the next operation.

Despite their eight inch rim diameter and 1.6 pound weight, the parts are dispatched with minimal recirculation and noise production.

## Make your choice...

... the best choice, the first time.

Choose Spectrum for your parts feeding needs.

You'll profit right away with Spectrum's time proven premium quality.
