

Keepers or Keys like these...

...are best fed with Spectrum's reliable orientor and flex track.

One vibratory storage and orienting system like this can be tooled to present two, four, six or eight paths of parts to key-up stations via quick clamp, flexible tracks.

A one cubic foot floorbin with a reciprocating elevator gets parts to the orientor.

Designed, hardened steel, bolt-in orientor tooling can easily feed Keys at 30 pieces per minute, per path.

Tracks can be snaked through confined areas, bent, twisted, and cycle-flexed to suit.

This model is a two path, low profile system that isolates and pneumatically propels a pair of Keys twenty feet to assembly.

Noise emission is less than 80 dB (A) at 3 feet.
