

Challenge us!!!

Tell us your need..... and we'll do the rest.

Six designs of Swash Plates are fed at 20 pieces per minute, with irregular forging flash on the perimeter.

Twenty cubic feet of the Brass Forgings are metered by stock conveyor to an elevating conveyor.

Parts are face selected, on edge, in a straightline vibratory orientor, and released, laying flat, to a live feed conveyor.

An escapement releases one part at a time for processing. No tooling adjustments are required.

Remaining parts, at changeover, are purged via a diverter chute at the top of the elevating conveyor.
