

“Don’t get burned”

Burner tubes for water heaters are...

...manually loaded into a storage metering conveyor (A).

Up to 1,000 pieces are placed diameter to diameter, end selected for flanges.

Tubes are metered into a reservoir (B). A reciprocating ram moves parts up and into a short track (C).

A one-at-a-time rotary escapement isolates and presents tubes at 15 pieces per minute for robotic processing (D).

Multiple part lengths are handled, one size at a time, with simple adjustments.

Gentle & Quiet
