

TWO GRAMS IS THE WEIGHT TOLERANCE OF...

...these brass and aluminum Slugs being fed to a forge heater.

A twenty cubic feet bulk metering conveyor delivers one size at a time to a conveyor orientor.
Adjustable tooling gets the disc-like parts lying flat and the shaft-like parts end to end to a live feed conveyor.

A weight assurance scale checks each Slug. Acceptable Slugs go to the heater.
Out of tolerance parts are ejected.

Over 150 different products are made from Slugs like these at 500 pieces per hour.

Benefits:

- No damage to forge tooling by over-weight Slugs.
- No incomplete products from under-weight Slugs.
- No headaches with a robust Spectrum parts feeding system.
