

Unique Custom Conveyor

A client has a 30 foot process enclosure with an over head monorail carrying two ton parts through it. The work pieces are hooked to roller dollys.

They needed a means to power the dollys slowly along the enclosure.

We designed and built a special conveyor with a pair of outboard dolly pushers.

Because of processing clutter our conveyor had to be suspended from over head trusses.

A loaded dolly is manually moved to the enclosure where a sensor starts our push action.
