

This parts family is fed to a cold former with a single Spectrum feeder, equipped with an orientor tooling shell and four interchangeable tooling plates.

Changeover is done in less than five minutes.

Non-adjustable tooling plates take the guesswork and skilled labor out of your feeder set up.

Versatility pays ...

... and it's easy to get with Spectrum's straight line parts feeders.

Consider an orientor tooling **shell** with your next parts-family feeder.

Then; merely exchange orientor **tooling plates** for fast, efficient changeover from part to part.

Call, write or drop in for parts feeders with versatility.
