

A **Spectrum** feeder, with easily adjusted tooling, handles a family of bearing races like these. Races vary from 1-1/8 to 5 inches diameter by 5/8 to 1-7/8 inches thick. They can be single, double or non-flanged type.

One single flanged race (3" diameter by 7/8"

thick) is fed, face selected, at better than 160 pieces per minute.

Smallest races are fed at better than 300 per minute while the largest go at 35 per minute.

Noise is controlled within OSHA limits.

Stay alive!!!

... cut labor costs with low cost, fast payoff investments.

Most **Spectrum** feeders pay for themselves in less than a year.
