

Track link bushings, in various manufacturing stages, are loaded into our forty cubic feet storage bin, elevated to two paths, oriented end to end, and fed to a surface coating process.

A family of parts 2" to 4" diameter x 2" to 6½" long, weighing up to fourteen pounds, are fed at twelve to fifty pieces per minute. Changeover takes only ten minutes.

Bearing down...

... on production costs?

See **the** parts feeding team; SPECTRUM.
