

We feed these steel sleeves and neoprene bushings to an assembly machine for automotive suspension units.

Two paths of each part are fed to assembly stations at a minimum rate of 30 pieces per minute.

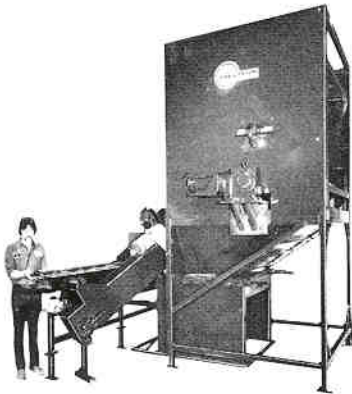

The sticky, rubber-like part is fed as easy as the

steel sleeve.

A rotary box dumper straddles the feeder floor bin for convenient stock backup.

Feeder noise is limited to 80 decibels.

SPECTRUM — for complete feeder solutions.

# Be sure...

... your feeders come with designed tooling and the drawings.

SPECTRUM designs 'em and you get drawings.

Call, write or drop in for SPECTRUM's designed tooling feeders.
