

“What’ll ya have?”

This feeder has full menu of designed, quick-change, bolt-in tooling for eight different Arbors and Caps.

Three cubic feet of any part is stored, elevated, oriented, and live feed tracked to final registry at 300 pieces per hour, for robotic pickup.

Live feed tooling presents Caps diameter to diameter, axes vertical, and face selected. Arbors are hung by their large diameters and radially controlled by their hex shanks.

Changeover from part to part takes two to ten minutes.

Designed, straightline, vibratory tooling makes all this possible in a single feeder.
