

Flat Washers...

...are quality inspected at 200 to 300 pieces per minute

A 10 cubic foot overhead hopper meters parts (one size at-a-time) through a demag coil into a vibratory straight-line drive with interchangeable tooling.

It takes only five minutes for part changeover.

Tramp material is screened out.

A camera checks for silhouette compliance and ejects faults.

Finally, Washers are sorted for thickness and / or warp between a pair of motor driven gage wheels.

This model will handle up to a 3-1/4 inch diameter part.

The unit runs 24/7 unattended.
